

Cell Membrane Transport Foldable

1. Fold your sheet of paper hot dog style and cut the top flap into 4 equal segments.
2. Write your name on the back.
3. **On the front of each flap**, write 1 type of transport (**Diffusion, Osmosis, Facilitated Diffusion, or Active Transport**).
4. **Behind each flap:**

- a. **On the top half**, Answer the following questions:
 - i. Is it **passive** or **active transport**?
 - ii. Does it require **energy (ATP)**?
 - iii. Are substances moving from **high to low** concentration or **low to high** concentration?
 - iv. Do substances move through the **lipid bilayer** or a **protein channel**?
 - v. Give an example of a molecule that uses this type of transport
- b. **On the bottom half**, draw a picture that represents each type of membrane transport.
